

Course Syllabus

MCP Server Install

We are glad you have joined us for this course! Here is some information that will help you to navigate your learning platform and locate course content.

Joining the Session

Before the first live session please confirm that you can access Zoom:

1. Visit <https://support.zoom.us> and click on **Getting Started**.
2. Attn Percipio Users - The **Join live course** option is available where you registered for the session in Percipio 15 minutes prior to the start of class.

Course Description

Model Context Protocol (MCP) servers act as a standardized "bridge" that allows AI agents, like GitHub Copilot, to securely interact with your local development environment and external tools. By configuring an MCP server for services like GitHub or MongoDB, you give the AI the ability to perform real-world actions—such as creating branches, committing code, or querying databases—directly within your VS Code interface. This moves the AI beyond a simple chat interface and transforms it into a functional collaborator that can see your file context and execute complex technical workflows on your behalf.

There will be three other documents related to the install of the three MCP Servers.

Note: this is the third and last of a three-part Git-GitHub-MCP Server bootcamp. It can be taken as a stand-alone bootcamp, or you can combine it with Git and GitHub (on separate days).

Target Audience

Newer programmers with at least 2 years working experience. The examples are in a Node environment with JavaScript as the main language.

Agenda

After completing this course participants will be able to install the following MCP Servers in a VS Code environment: Git, MongoDB and Postman

- Participants will be able to configure all three servers
- Learners will be able to use the Chat window of GitHub Copilot to accomplish tasks
- Users will be able to work through errors related to the current environment and project

Topics

Install and configure the GitHub MCP Server

Install and configure the MongoDB MCP Server

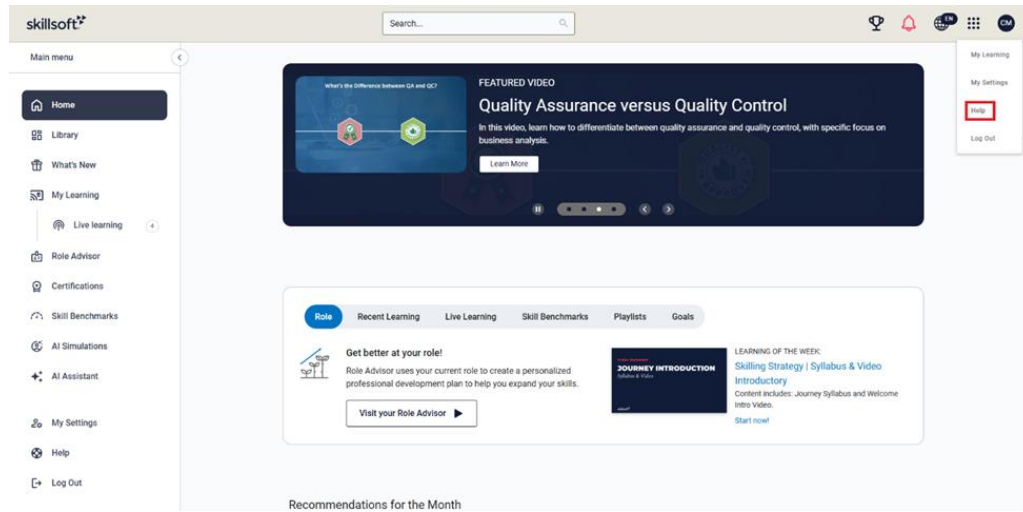

Install and configure the Postman MCP Server

Note: there is some accompanying code for this bootcamp. You will receive a zipped assets folder.

Technical Support

We offer 24/7 support if you need assistance with your Percipio or Skillport learning platforms. To access support, click the initials of your profile and select "Help".

Percipio

Environment

We will be using the NodeJS environment to run all the examples and code in this bootcamp.
The instructor will be using a Linux VM along with VS Code.
Any OS will work if you are able to install NodeJS on it.
An online sand box is also available to Percipio users

OS - Ubuntu 24.04.2 LTS
NodeJS – v24.14.0
npm – 11.9.0
Git – 2.5 or later
